

Table of Contents

1. Meet the Boards.....	1
Introduction.....	1
Structure.....	1
Objectives.....	2
Espressif devices	2
<i>System on chip</i>	2
<i>Using SoCs</i>	3
<i>Modules</i>	3
<i>When to use modules</i>	4
<i>Development boards</i>	4
<i>When to use development boards</i>	5
<i>Programming environments</i>	5
<i>ESP-IDF</i>	5
<i>Using the ESP-IDF</i>	6
Raspberry Pi Pico.....	6
<i>Pin functionalities</i>	8
<i>Adding communications capabilities</i>	10
<i>Programming the Raspberry Pi Pico</i>	11
Raspberry Pi Computer	12
<i>Raspberry Pi 4 uses and features</i>	12
<i>Installing the Raspberry Pi OS</i>	14
<i>Raspberry Pi Imager</i>	14
<i>Discovering the IP address of the Raspberry Pi</i>	18
<i>Detecting the Raspberry Pi</i>	19
<i>SSH clients</i>	19
Conclusion.....	21
2. Installing the Software Environment	23
Introduction.....	23
Structure.....	23
Objectives.....	24
Installing Arduino	24

Visual Studio Code.....	25
<i>Installing VS Code.....</i>	26
<i>Download VS Code</i>	27
<i>Installing on Windows</i>	27
<i>Installing on Mac</i>	28
<i>Installing on Linux</i>	28
<i>VS Code extensions</i>	28
<i>Installing Espressif extension</i>	30
<i>Installing PlatformIO extension</i>	31
Python for embedded development.....	33
<i>Python in Raspberry Pi</i>	33
<i>Using virtual environments in Python.....</i>	34
<i>Running a web app with Python</i>	35
<i>Building an app to connect to ChatGPT.....</i>	38
<i>Reading and writing log files with Python</i>	43
<i>Sending an e-mail using Python.....</i>	44
<i>CircuitPython</i>	46
<i>Installing CircuitPython extension in VS Code</i>	46
<i>MicroPython.....</i>	47
<i>PyMakr.....</i>	47
Conclusion.....	48
3. Microcontrollers, Sensors, and Actuators	49
Introduction.....	49
Structure.....	49
Objectives.....	50
Sensors	50
<i>Types of sensors by measurement</i>	50
<i>Temperature sensors</i>	50
<i>Humidity sensors</i>	51
<i>Pressure sensors</i>	51
<i>Light sensors.....</i>	52
<i>Motion sensors</i>	52
<i>Types of sensors by interface.....</i>	53
<i>Analog sensors</i>	53
<i>Digital sensors.....</i>	53

Inter-Integrated Circuit sensors.....	54
Serial Peripheral Interface sensors	54
1-Wire sensors	54
Characteristics of sensors.....	54
Actuators.....	55
Electromagnetic relays.....	55
Solid State Relays	56
Motor drivers.....	56
Basic projects with microcontrollers	56
Using MicroPython in Raspberry Pi Pico.....	56
Installing the MicroPython firmware	56
Accessing the microcontroller from VS Code.....	57
Creating a new project	58
Blinking a LED	59
Using ON/OFF sensors	61
Voltage levels	61
Pull-up and pull-down configurations	62
Polling versus interrupt.....	63
Sensing a button with the polling technique.....	64
Bouncing effect.....	64
Sensing a button with interruptions.....	66
Reading an analog sensor.....	67
Reading a 1-Wire temperature sensor	69
Using MicroPython with other boards	71
Using Arduino with Raspberry Pi Pico	72
Reading an analog sensor.....	73
Using Arduino with ESP8266 and ESP32	74
Controlling a relay	76
Controlling a motor driver	79
Conclusions	82
4. Interfacing with Raspberry Pi.....	83
Introduction.....	83
Structure.....	83
Objectives.....	84
Raspberry Pi GPIO	84

<i>Numbering GPIO</i>	84
Using the filesystem to access the GPIOs	85
<i>Kernel space and user space</i>	85
<i>Using Sysfs</i>	86
<i>Sysfs structure</i>	86
<i>Steps to perform I/O using Sysfs</i>	86
<i>Exporting GPIO control to userspace</i>	86
<i>Controlling GPIO with Sysfs</i>	87
<i>Managing GPIO with libgpiod</i>	87
<i>Installation of libgpiod tools</i>	88
<i>Using the gpiod binaries from the command line</i>	90
<i>Controlling a pin</i>	92
<i>Reading a pin</i>	95
Controlling GPIO with Python	96
<i>Using RPi.GPIO</i>	97
<i>Install a system-wide package with apt</i>	97
<i>Install a system-wide package with pip</i>	98
<i>Install RPi.GPIO within a Python environment</i>	98
<i>Reading pins with RPi.GPIO</i>	99
<i>Polling</i>	99
<i>Interruptions</i>	102
Using Node-RED	105
<i>Installing Node-RED</i>	105
<i>Running Node-RED</i>	107
<i>Running Node-RED as a service</i>	107
<i>Building flows in Node-RED</i>	107
<i>Reading a pin using Node-RED</i>	108
<i>Controlling a pin using Node-RED</i>	110
<i>Exporting and importing flows in Node-RED</i>	111
Conclusions	113
5. Connecting IoT Devices using MQTT	115
Introduction	115
Structure	115
Objectives	116
MQTT features	116

MQTT topics	117
Topic structure.....	117
Wildcards.....	117
Best practices	118
MQTT QoS.....	118
QoS 0	118
QoS 1.....	119
QoS 2.....	119
MQTT versions	119
MQTT payload.....	120
Wildcard filters.....	120
Retained messages	120
Session persistence	120
Last Will and Testament.....	120
Security features.....	121
Scalability	121
Message expiry.....	121
Version 5.0.....	121
Mosquitto.....	122
Installing Mosquitto.....	123
Using the Mosquitto client.....	124
Using the MQTTX desktop client	124
Connecting to the broker using Python.....	125
Subscribing to a topic.....	128
Publishing to a topic.....	129
Connecting NodeMCU using Arduino IDE.....	129
Publishing on a topic.....	130
Subscribing to a topic.....	134
Adding encryption to MQTT.....	137
TLS/SSL and its usage	137
Requirement	137
Using Node-RED with MQTT	139
Using HiveMQ MQTT broker	144
Conclusion.....	146

6. CoAP for IoT Connectivity	147
Introduction.....	147
Structure.....	147
Objectives.....	148
CoAP fundamentals.....	148
<i>CoAP architecture.....</i>	<i>149</i>
<i>CoAP messages.....</i>	<i>150</i>
<i>Message structure</i>	<i>150</i>
<i>CoAP message header.....</i>	<i>150</i>
<i>Token.....</i>	<i>151</i>
<i>Message types.....</i>	<i>151</i>
<i>Message options</i>	<i>151</i>
<i>Payload</i>	<i>152</i>
CoAP security.....	152
Using CoAP in Raspberry Pi.....	153
<i>Installing libcoap</i>	<i>153</i>
<i>Running libcoap.....</i>	<i>155</i>
<i>Creating dynamic resources</i>	<i>156</i>
Using aiocoap.....	157
<i>Installing aiocoap</i>	<i>157</i>
<i>Documentation of aiocoap module</i>	<i>158</i>
<i>Implementing CoAP clients with aiocoap.....</i>	<i>158</i>
<i>CoAP client to set a resource value</i>	<i>158</i>
<i>CoAP client to get a resource value.....</i>	<i>159</i>
Implementing CoAP with Node-RED.....	160
<i>Installing CoAP in Node-RED.....</i>	<i>160</i>
<i>Implementing CoAP in Node-RED.....</i>	<i>162</i>
<i>Creating a CoAP server in Node-RED</i>	<i>162</i>
<i>Adding a GET resource</i>	<i>165</i>
Using CoAP with Arduino.....	167
<i>Installing the library.....</i>	<i>167</i>
<i>Programming the Raspberry Pi Pico W</i>	<i>168</i>
<i>Testing the program</i>	<i>171</i>
Conclusion.....	172

7. Using HTTP and WebSockets in IoT	173
Introduction.....	173
Structure.....	173
Objectives.....	174
Hyper text transfer protocol fundamentals.....	174
<i>Hyper text transfer protocol</i>	174
<i>Architecture and communication model</i>	175
<i>Methods and headers</i>	176
<i>Headers</i>	177
<i>Hyper Text Transfer Protocol status codes</i>	178
<i>Hyper Text Transfer Protocol resources</i>	180
<i>Uniform Resource Identifier</i>	180
<i>Structure of a URL</i>	180
Implementing HTTP in Node-RED	182
<i>Accepting HTTP requests in Node-RED</i>	182
<i>Getting data from the internet</i>	184
Using HTTP with microcontrollers.....	186
<i>Sending data through HTTP in ESP8266</i>	186
<i>Volatile variables</i>	190
<i>ICACHE_RAM_ATTR parameter</i>	190
<i>Implementing and testing</i>	191
WebSockets	191
Implementing WebSockets in Node-RED	192
Using WebSockets in microcontrollers	196
<i>Arduino code</i>	197
Conclusions	201
8. Storing Internet of Things Data.....	203
Introduction.....	203
Structure.....	203
Objectives.....	204
InfluxDB fundamentals	204
<i>InfluxDB hierarchy</i>	204
<i>Data structure</i>	204
<i>Timestamps</i>	205
<i>Measurements</i>	205

Fields	205
Tags.....	206
Series in InfluxDB.....	206
Data standardization.....	207
Building a data model	208
Installing InfluxDB in a Raspberry Pi.....	209
Installation steps.....	209
Accessing the web interface	210
Storing and reading data in the bucket.....	213
Using Python to store data in InfluxDB	213
Using Node-RED to write and read data points	219
Writing data points.....	219
Reading data points.....	221
Using InfluxDB Cloud service.....	224
Conclusions	226
9. Visualizing Internet of Things Data	227
Introduction.....	227
Structure.....	227
Objectives.....	228
Installing Grafana in Raspberry Pi.....	228
Data sources	229
Adding InfluxDB as a data source	230
Populating the bucket with system usage data.....	233
Exploring the data in the bucket	236
Building a dashboard in Grafana	238
Adding visualization panels	241
Visualization options.....	241
Time series visualization	242
Gauge panels	243
Stat panel.....	244
Table panel.....	245
Plugins in Grafana.....	245
Types of plugins	246
Signed and unsigned plugins	246
Non-signed plugins.....	247

Installing a plugin in Grafana.....	247
<i>Using the Grafana command line interface</i>	247
<i>Installing plugins manually</i>	248
Alerts in Grafana	248
<i>Working on alerts in Grafana</i>	248
<i>Building alerts in Grafana</i>	249
Notifications in Grafana	254
<i>Contact points</i>	254
<i>Using the email contact point in Grafana</i>	255
<i>Notification policies</i>	256
Users and permissions in Grafana	258
Using Grafana Cloud Service	259
<i>Pricing plans</i>	260
Conclusions	260
10. Building a Weather Station	261
Introduction.....	261
Structure.....	262
Objectives.....	262
Preparation of the Raspberry Pi	262
<i>Enabling I2C</i>	262
<i>Installing command line tools</i>	264
Using BME680 with Raspberry Pi 4.....	265
<i>Connecting and testing BME680</i>	266
<i>Obtaining data from BME680 using Node-RED</i>	267
<i>Building a dashboard in Node-RED</i>	268
<i>Installing Node-RED dashboard 2.0</i>	268
<i>Programming the visualization</i>	270
Storing BME680 values.....	273
<i>Writing sensor values to a CSV file</i>	273
<i>Reading data from the file</i>	276
<i>Storing the values in InfluxDB</i>	277
Visualizing the data in Grafana	279
Connecting to cloud weather services.....	282
<i>Building a dashboard for Open Weather</i>	284
Conclusion.....	289

11. Home Automation	291
Introduction.....	291
Structure.....	291
Objectives.....	292
Using Home Assistant	292
Installing Home Assistant in Raspberry Pi.....	293
Initial setup.....	297
Customizing Home Assistant.....	300
<i>Installing SSH add-on</i>	<i>300</i>
<i>Installing the file editor.....</i>	<i>303</i>
<i>Installing Home Assistant Community Store.....</i>	<i>305</i>
<i>Installing and using Mosquitto in Home Assistant.....</i>	<i>308</i>
Creating a Tasmota device	311
<i>Building a thermostat</i>	<i>312</i>
<i>Programming the device</i>	<i>312</i>
<i>Connecting to the MQTT broker</i>	<i>313</i>
<i>Configuring the relay and the sensor.....</i>	<i>314</i>
<i>Finishing the configuration</i>	<i>315</i>
<i>Adding the Tasmota device to Home Assistant</i>	<i>316</i>
<i>Creating an automation</i>	<i>317</i>
<i>Add the new device to the dashboard.....</i>	<i>319</i>
Using openHAB.....	321
Installing openHAB.....	322
Initializing openHAB.....	324
Creating an ESPHome device.....	326
<i>Connecting the hardware.....</i>	<i>326</i>
<i>Programming the firmware</i>	<i>327</i>
Integrating the ESPHome device in openHAB	328
Creating an automation in openHAB.....	331
Creating a dashboard in openHAB.....	335
Conclusions	338
Index.....	339-346
